

1st Presentation Feedback
March 30, 2022

Professor's Feedback

User stories were missing. Use cases need to be more in depth.

- ☐ To do: work on user stories and use cases. PM will look for a template we can use.

Database datagrams may not be comprehensible to stakeholders because they are not knowledgeable with those graphs.

- ☐ To do: Create a comprehensible data flow graph for stakeholders

Wenkai brought up an issue about a missing API which is the first time he has ever brought up such a topic.

- ☐ To do: a group discussion will be needed to decide upon which API platform we are going to use.
- ☐ Are there easier ways of going about this without using an API since **ALL** of us are unfamiliar with API's ?
- ☐ Since Wenkai brought up the topic of API without asking our team members if it was plausible, does Wenkai have any other suggestions?
- ☐ If we need to use API we will need **back-end AND front-end** to research and work together to see the success of this.

Michael's Feedback

ERD looks better but it's still missing some features.

- ☐ To do: review actors in the system

Michael wants to see more user stories

- ☐ To do: work on more user stories

Domain slide

- ☐ To do: for the final presentation include more about NFT's by including an NFT certification diagram showing how it has ownership, its non-expiring, non-transferable ownership this is important because most NFTs you can trade and sell which won't be the case for these.
